

the website that according to me had a not so good design and needed work was craigslist which I occasionally visit at times but do not find very attractive, so i remodelled the website and played with the same elements just reordered them in order to make them appear in a way that would make the user like it. The following are the specifications of the design:-

Project-Craigslist

Description: Header
background- #737373

Logo-
Font family -Poppins-regular
Fpnt size - 40 px
color- white
Alignment- center
